WiSACWIS Update Notice
Worker Assignment

The Worker Assignment functionality in WiSACWIS will be modified for build 3.7 that is scheduled for release on February 24, 2003. Previously, history was not captured when the when a worker's location changed. This made it impossible to know if the worker had ever worked in a different location within the county or had been employed by another county altogether. This change to the worker functionality will now capture the historical location information from this point forward.

Summary of Changes

If any of the four required location fields (Employing Entity, County/State, Site/Office, Unit) on the Maintain Worker Information window are changed and the user selects the OK button the following will occur:

- If the worker has any open assignments the following edit message will appear: "Worker has open assignments. Reassign open assignments prior to updating the worker's location." Similarly, the Worker record will not be updated.
- After the user selects OK on the edit message the location values will be reset and the user will be returned to the Maintain Worker Information window.

If the worker does not have any open assignments then the changes will be accepted and the Worker record will be updated.

The County/State, Site/Office and Unit fields
